Release Notes - October - 2 2016

- Improvements
    - Transfer Cloaking
- Bugfixes
    - Comparison Types for Propel QueryBuilder
    - Discount Rounding
    - Redirect Fix for Login

Improvements

Transfer Cloaking

Formerly exceptions were silently caught in `$foo->fromArray($bar->toArray(), true)` when the second parameter (`$ignoreMissingProperty`) was was set to `true` and it tried to set a string on an array property. Now the transfer generation throws an exception for invalid matches. Please ensure that types match when using `fromArray()`.

Affected Bundles

Major	Minor	Patch
n/a	- Transfer 2.2.0	- Product 3.0.2

Bugfixes

Comparison Types for Propel QueryBuilder

The `QueryBuilder` class did not take into account that there are comparison types (e.g. `NOT_IN`) which are also valid with arrays. Previously an exception was thrown for anything that was different from `Criteria::IN`. This is fixed now and the QueryBuilder now also allows `NOT_IN` conditions.

Affected Bundles

Major	Minor	Patch
n/a	n/a	- Propel 2.3.2

Discount Rounding

The transformation of values inside the `FixedPlugin` and `PercentagePlugin` classes had rounding issues.
The `transformForPersistence()` and `transformFromPersistence` methods have been fixed and tests have been added to avoid regression.

Affected Bundles

Major	Minor	Patch
n/a	n/a	- Discount 3.2.2

Redirect Fix for Login

Before it was possible to inject external URLs into the redirect after login. This can present security risk as a leading '/' doesn't protect users from phishing, protocol-relative URIs start with '//'. This issue is fixed now. The usage of redirect is limited to domain internal URLs. In addition to that any POST action forcing a re-login will not set a referrer as redirect.

Affected Bundles

Major	Minor	Patch
n/a	n/a	- Auth 2.0.10
